Reclaim

The First-5-Days Recovery Assistant for Cyber-Fraud Victims

FOUNDER'S CODE 2026
1-Page Proposal

1. Topic Title: Reclaim – First-5-Days Recovery Assistant for Cyber-Fraud Victims

2. Domain Selection: Cybersecurity & Digital Safety

3. Problem Statement

After a UPI or banking fraud, money is lost in the **confused hours and days that follow**. About **51% of UPI-fraud victims file no official complaint** and users call the reporting process complex (LocalCircles, 32,000+ responses). Delay is costly: Odisha recovered only **~2.7% of ₹370 crore** lost in 2023–25, with police citing late reporting (the420). Recovery needs **three separate actions** – a 1930 call, a full complaint on cybercrime.gov.in using the 14-digit acknowledgement, and a written bank report – which most victims never complete. From **1 Jan 2027**, RBI's new directions compensate losses up to ₹50,000 (85%, max ₹25,000) **only if reported to both 1930/NCRP and the bank within 5 calendar days**. Most victims will not know this rule.

4. Proposed Solution

Reclaim is a **mobile-first web app and WhatsApp assistant** (no install) that turns panic into a complete, correctly filed case:

1. **Read the evidence** – victim uploads the UPI screenshot or bank SMS; Reclaim extracts UTR, amount, date-time, bank and scammer's UPI ID.
2. **Act in the right order** – a 1930 call script with every number asked, then a portal-ready NCRP complaint using the acknowledgement, then a bank dispute letter.
3. **Never miss a deadline** – live countdown to the 5-day compensation window, bank's 45-day resolution deadline, and RBI Ombudsman escalation if the bank stalls.
4. **Stay safe** – one evidence pack (PDF) for police and bank; warns against "recovery" agents who ask for money. Reclaim never handles funds.

5. Technical Approach

Technology Stack: React PWA (mobile-first) · WhatsApp Business API (Twilio) · FastAPI · OCR (Tesseract / Google Vision) + regex parsers for UTR, amount, UPI ID · LLM for scam-type tagging and complaint drafting · PostgreSQL · scheduled reminders (SMS/WhatsApp).

Key Features: screenshot-to-case extraction · guided 3-step filing · 5-day and 45-day deadline tracker · acknowledgement-number vault · auto-generated complaint, bank letter and evidence PDF · Tamil/English · bank dashboard of cases and deadlines.

Prototype / MVP Feasibility: OCR pipeline, document generator, countdown tracker and dashboard are buildable in 24 hours. **Live demo:** upload a sample fraud screenshot → fields fill in → countdown shows "Eligible: up to ₹25,000" → complaint, bank letter and 1930 script appear in seconds. No access to bank accounts – only evidence the victim chooses to share.

6. Business Approach

Target Customers / Users: *Payers* – banks (must process these claims under the new RBI rules), cyber-insurers and fintech/UPI apps. *Users* – fraud victims (always free), police cyber cells.

Revenue Model (estimates to validate):

Revenue stream	Price	Basis
Bank licence (white-label)	₹6 lakh / bank / year	Complete claims, faster 45-day resolution, audit trail
Cyber-insurance claim packs	₹150 / verified claim	Clean, timestamped evidence cuts claim-processing time
Fintech / UPI app integration	₹2 lakh / year + usage	"Report fraud" button that opens Reclaim inside the app

Go-to-Market: victims don't find Reclaim – **their bank sends it to them** when they report fraud. Pilot with one mid-size bank before the Jan 2027 rule → add 1930/cyber-cell SMS links and branch QR posters → insurers → more banks.

7. Expected Impact

More victims complete all three reports on time · more cases eligible for RBI compensation · faster bank holds before money moves · cleaner evidence for police. **Measured by:** % of cases with both acknowledgements within 5 days, time from fraud to first report, and % of eligible victims who receive compensation.

8. Challenges & Risks

Risk	Mitigation
No public API to auto-file on the portal	Reclaim prepares and pre-fills; the victim submits – fully within official channels
Sensitive financial data	Victim-shared evidence only, masked account numbers, delete on request, no bank login
Being mistaken for a "recovery" scam	Free for victims, never handles money, distributed through banks and police links
OCR errors on screenshots	Victim confirms every extracted field before documents are generated
Rule details may change	Rules engine is configurable; RBI directions checked at launch
